EDUCATION

B.Tech – Computer Science and Engineering | ABES Engineering College, Ghaziabad *2024 – 2028*
GPA: 8.85 / 10

Class 12 – CBSE | Sunder Deep World School, Ghaziabad *2024*
Score: 85%

Class 10 – CBSE | Sunder Deep World School, Ghaziabad *2022*
Score: 88.5%

PROJECTS

Vibe Check Dashboard – AWS, Python, JavaScript | github.com/tanmaygarg06/VibeCheck *Feb 2026*

- Developed a real-time sentiment analysis tool that classifies text into 8 emotions with ~500 ms response time using AWS Lambda (Python 3.12) and API Gateway.
- Architected a REST API backend that scales to thousands of requests per minute at ~$0.01 per 1,000 invocations, with no dedicated server infrastructure required.
- Modeled DynamoDB tables with partition and sort keys to store per-user emotion history and support mood trend queries across multiple sessions.
- Secured all API endpoints using key-based authentication, per-client rate limiting, and CORS headers to prevent unauthorized access.
- Delivered the client interface in HTML, CSS, and JavaScript with inline chart rendering; no external framework dependencies were used.

Real-Time Stock Analyzer – AWS, Power BI | github.com/tanmaygarg06/Real-Time-Stock-Dashboard *Jan 2026*

- Automated time-series stock data ingestion for 8+ symbols using a scheduled AWS Lambda function that writes processed records into DynamoDB.
- Connected the data layer to a Power BI dashboard with a 5-minute refresh cycle, enabling near real-time stock price and trend visualization.
- Restricted dashboard access to verified users by integrating Amazon Cognito user pools, preventing unauthorized exposure of live market data.
- Deployed the frontend as a static site on Amazon S3, reducing hosting costs while maintaining high availability through managed AWS infrastructure.
- Structured DynamoDB tables using a time-series partition schema to enable fast range queries for multi-symbol historical price comparison.

CERTIFICATIONS

Introduction to Internet of Things – NPTEL, 2025
Introduction to Industry 4.0 and Industrial Internet of Things – NPTEL, 2025

SKILLS

Programming Languages: Java, Python, C, JavaScript, HTML, CSS
Cloud – AWS: Lambda, API Gateway, DynamoDB, S3, Cognito
Concepts: Data Structures and Algorithms, Object-Oriented Programming, REST APIs, Serverless Architecture
Tools: Git, GitHub, VS Code, Power BI

ACHIEVEMENTS

- Member of CodeChef Club, ABES Engineering College – Competitive Programming Department; participated in monthly coding contests and peer programming sessions.
- Solved 150+ problems on LeetCode covering arrays, strings, recursion, and dynamic programming within the first two years of B.Tech.
- Independently planned, built, and deployed two production-grade AWS cloud projects within two months as a second-year undergraduate student.
